

Landed Costing

The most stable, reliable and comprehensive Landed Costing and shipment tracking solution for Microsoft Dynamics® AX.

Landed Costing streamlines your entire inbound shipping operation. Expanding on standard Microsoft Dynamics AX, Landed Costing introduces new possibilities for costing and tracking of goods once they are in transit. Landed Costing has many benefits ensuring accurate costing with full capture of every step in the process, sophisticated allocation ensuring accurate inventory costing and margin recognition, powerful options to ensure fast transition of inventory and billing without the loss of true landed cost expenditure, and freight tracking options for better monitoring and customer updating.

This improved functionality enables the operation to be more effective and make far better decisions. Landed Costing automates administrative tasks, allowing more focus on the exceptions and strategic initiatives.

Features

Shipment/Container Tracking

- Multiple Leg Journeys
- Drag and Drop Designer
- One-Click Creation with Journey Templates
- Simple Tracking with Status

Landed Costing

- KG/Lbs/M3 Distribution

Landed Costing gives you complete financial and logistical control of imported freight – from manufacturer to warehouse.

Landing costs often account for 40% or more of the total cost of each imported freight item.

First, there's transport to the departure port, loading, sailing, customs clearance and transport from the port of arrival. Then there are the delays, duties or other contingencies that will impact on the landed price.

Template Shipping and Costing

Landed Costing supports the creation of a series of templates covering standard freight journeys. All steps can be templated with a series of costing reflecting all fees incurred throughout the freight journey. Costs can be accrued or actual costs recorded for each step.

With a single data entry, Landed Costing system allows you to record costs for every step of the journey quickly and accurately.

Cost allocations can be as simple or complex as you want and a single container can have costs allocated automatically across items owned by different legal entities.

These automated templates lower administration costs, and ensure full legal and regulatory compliance for all freight shipments.

Lead times

Overview

Filter

Mode of delivery: SEA From port: []

	HK	MEL	SYD
HK		13	10
MEL	13		13

Freight	Volume			Fixed		2,000.00	USD	

Every step of a shipment can be defined. A purchase order and shipment can be dragged and dropped between containers. Landed Costings is true multi entity and a container or shipment can have different orders for different legal entities. All costs will be allocated back to the correct entity.

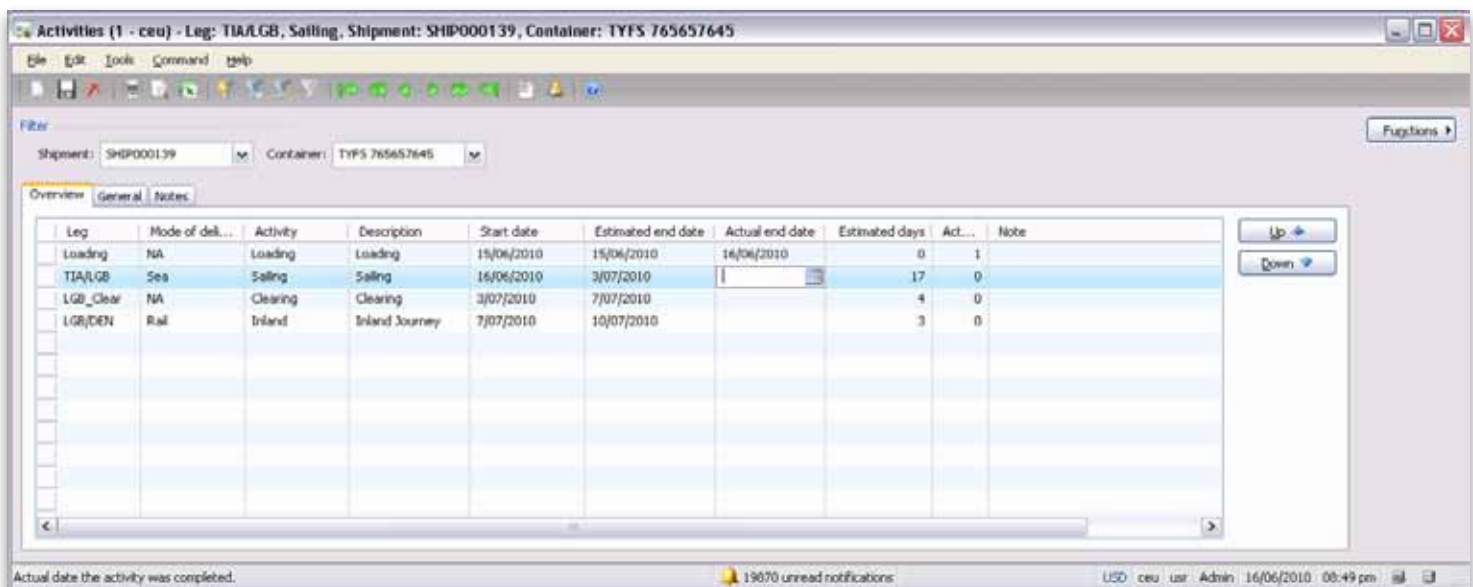

Shipment Tracking

Landed Costing includes functionality to record and track shipments in transit. All data is directly integrated to the Purchasing and Sales Order to provide current information to customers.

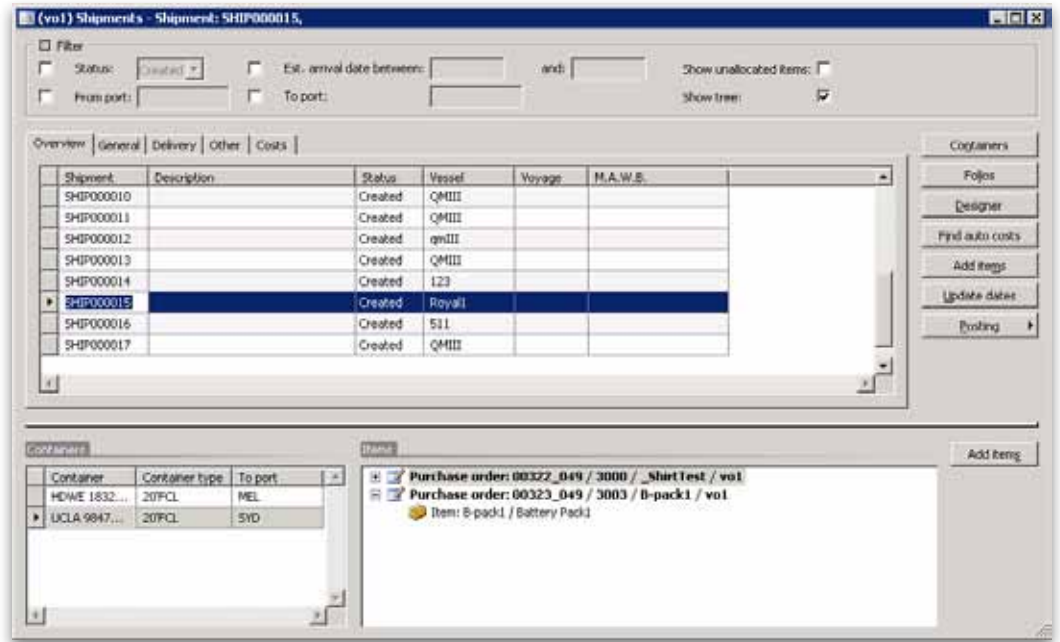

All data is integrated across the standard Microsoft Dynamics AX suite. Simply enter an activity start or end date such as the loading date, that single entry updates the shipping status, and the Purchase Order receipt or confirmed date.

- Record lead times between multiple ports based on rules
- Assign a shipment status to the Purchase Order line i.e. goods in transit
- Process invoices prior to receipting of goods
- Cross entity sharing of containers and shipments
- Place goods from multiple vendors/countries/regions in the same container

Benefits of Landed Costing

- Accurate and timely costing
- Increase financial and logistical visibility into the extended supply chain
- Streamline receiving processes
- Predict the Landed Costing of an item giving the company the ability to make better and more agile decisions
- Reduce administration and costing errors
- Maximize item profitability
- Reduce internal follow-up calls from sales, customer service, logistics, and where applicable, purchasing
- Planning in the warehouse through better visibility
- Customer service is improved by providing immediate visibility of stock delays which impact customer deliveries
- Enhance sourcing competitiveness.
